

## Queensland Road

Queensland Road in North London is a unique residential development that backs on to the Arsenal Emirates Football Stadium. The light bronze coloured Aluminium is a unique material that it is painted in a high quality PVDF finish, which involves painting the aluminium in a process known as coil coating. The result is a stunning and true metallic finish, similar in quality to that of a new car's paintwork. The façade is further complimented by the blue terracotta tiles and gives the development a truly modern and high quality finish.
